

Boost

25db of clean Mosfet boost
Available in a small compact enclosure. Handbuilt and true bypass you can use it as a buffer to add clarity to your signal, a clean boost, or to saturate your preamp tubes into tonal oblivion. Built with through hole components and 100% analog. Sculpt your tone like never before.

Layout and Overview of the Boost

Boost: This controls the level of the Boost. This control is most active after the noon position

In: Instrument input

Out: To amplifier

9VDC: 2.1mm center negative power supply jack

Louder: On/Off True Bypass switch

Either a 9v high quality alkaline battery or a 2.1mm center negative power supply and cable can power your new pedal. When operating the pedal via battery you should unplug the pedal when not in use to insure the longest battery life. Use high quality electronics grade cleaners and lubricants for the occasional cleaning of pedal components.

If you have any other questions or concerns please visit the FAQ page at www.wilsoneffects.com or email me at wilsoneffects@wilsoneffects.com. Your new pedal is covered by a one-year warranty on parts and labor. This warranty excludes friction-based components such as potentiometers and switches.
